

1. Graph the function and find the x and y-intercepts. Make sure to identify the intercepts on the graph by labeling them “x-intercept” and “y-intercept.”

$$y = 3x + 6$$

2. Identify the graph that has all of the following features:

- Increasing for all values of x
- Positive for values of x greater than 1
- Negative for values of x less than 1
- X-intercept of (1,0)
- Y-intercept of (0,-1)
